GROUP 8 PROJECT BRIEFING

Bus Agency Seat Booking System - Buea to Douala

The Project

A system for a Buea-Douala travel agency to manage buses, trips and seat bookings, replacing manual record-keeping.

Our Objectives

1. Brainstorm together and agree on the best features for the system.
2. Write the requirements and design the system before coding.
3. Build a working system (backend and frontend).
4. Test it.
5. Release Version 1.0 on GitHub with a user guide.
6. Every member contributes, with commits on GitHub.

BONUS (only if time allows): interview the agency or a real traveller to confirm our ideas.

How We Will Proceed

DAY 1	DAY 2	DAY 3
Get organised. Join GitHub, set up the board, brainstorm features in the group, start the rough data model.	**Write it down.** Turn the best ideas into written requirements and a use case diagram. Refine the design.	**Finish up.** Upload all documents to GitHub and get ready to code.

Team Rules

- Everyone accepts the GitHub invitation today.
- Everyone shares ideas during brainstorming. No idea is too small.
- Each team works on its own part and uploads documents to the **/docs** folder.
- Reply "done" in the group when you finish a task.
- The Project Lead checks in with everyone daily.

Teams

TEAM	MEMBERS
Project management	Mua Junior Tem (Lead), Brian-Austin Shiezi Mbe Jr
Analysis	Kwa Maxwill Mua, Mbaku Junior Williams Mudoh
Design	Glory-Anne Sombe Nganje, Nyaa Snowsel Bah Tah
Testing & QA	Beze Ombaks Njulefeh Jones, Masango Paula Ebude
Release & documentation	Djeubi Jesse Karston Mc-Voma, Ebwesuh Princewill
