CEF 345 Software Development Tools: Groups and Projects

How each group works

- Every student has one phase role, shared with at least one other student. The person marked Lead answers for that role's deliverables.
- Implementation has the most people: in a group of 10, 8 students code (5 backend, 3 frontend). Only the two project managers stay off coding, because they run the plan and the board for everyone else.
- Analysts and designers finish their documents and join implementation. Testing & QA and Release & documentation members code throughout.
- Every member of the implementation team must have commits in the Git history. Individual marks depend on it.
- Groups not yet complete will be assigned roles soon.
- The first name on each group is the Project Lead (Group Head) and is generally responsible for leading the group even during assignments.
